

Flutter Developer Interview Task

Small Task Requirements

Screen Layout

- Design a single screen in **landscape orientation only**
- Display **6 dropdown boxes** that are all visible simultaneously without scrolling
- Each dropdown should contain a list of items (use dummy data for now)

Functionality

- When a user selects an item from any dropdown, display a **data table below that specific dropdown**
- Each dropdown should **independently** trigger and display its own corresponding table
- Tables can use dummy content for demonstration purposes

Design Requirements

- **No spacing** between dropdown boxes
- Dropdowns should align properly across various device sizes
- Screen must be **responsive** and optimized for landscape mobile view
- Ensure proper layout adaptation for different screen dimensions while maintaining landscape orientation

Technical Notes

- Focus on landscape mobile optimization
- Use appropriate Flutter widgets for responsive design
- Implement independent state management for each dropdown-table pair
